STUDENT MANAGEMENT SYSTEM

OBJECTIVE

Perform manual functional testing of a Student Management System developed using HTML, CSS, and Vanilla JavaScript. Run the application locally in Google Chrome on Windows and verify its main features through manual testing.

PROJECT SOURCE

Project Name: Student Management System

Project Folder: `student-management`

Application Entry Point: `index.html`

Technologies Used:

- HTML
- CSS
- Vanilla JavaScript
- Browser LocalStorage

Execution Environment: Google Chrome on Windows

WORKFLOW

1. Review the project README and source files.
2. Inspect the HTML, CSS, and JavaScript files.
3. Open the local `index.html` file in Google Chrome.
4. Test adding new student records with valid details.
5. Verify that multiple student records can be added and displayed.
6. Check whether the total student count updates correctly.
7. Test searching students by name and roll number.
8. Verify that a selected student record can be deleted.
9. Test empty-input and whitespace validation.
10. Verify duplicate roll number prevention.
11. Test email address validation.
12. Refresh the browser and verify data persistence using LocalStorage.
13. Record the actual results of each functional test.
14. Prepare a functional test report in PDF format.
15. Verify the project source files and report in File Explorer.
16. Package the required deliverables into a ZIP archive, if required.

EXPECTED DELIVERABLES

1. Complete Student Management System project folder.
2. Functional Test Report in PDF format.
3. ZIP archive containing the project and test report, if required.
